Request for Proposal for Mobile Data Collection System | BRITE Bus

Amendment 1

1. **Does VA Brite desire a forward facing APP for your ridership or just tracking of the vehicles for management?**

   A customer-facing app not a requirement for this project but it is something that the CSPDC is considering for the future, as identified in our past BRITE Transit ITS Study, using the data from the mobile data collection system.

2. **Does VA Brite have a desired go live date from your notice to proceed?**

   There is not a required fixed go live date. The CSPDC is looking for the Proposer to provide a schedule that implements the system as expeditiously as possible.

3. **Who is your preferred mobile data telecommunications provider?**

   There is no preferred provider. The CSPDC is open to providers that have cost-effective plans and good coverage in the area. Currently, three buses are equipped with Wi-Fi through T-Mobile.
